* To ANNOTATE OR EDIT a diagram or part of a diagram (for example, for the insertion of lesion or electrode placement marks), use the Select Graphics option in the Tools menu. All or part of the diagram can be selected and copied for subsequent pasting into a graphic program or an advanced word processor program. The images are copied as bit-mapped. For better result after the area has-been selected, higher magnification should be chosen (usually 400%); use "Zoom to.." option from the View menu.
